Replication follows several steps that involve multiple proteins called replication enzymes and In eukaryotic cells, such as animal cells and plant cells, DNA replication occurs in the S phase interphase during the cell cycle. The process of DNA replication is vital for cell growth, repair, reproduction in organisms.

DNA Replication Steps and Process

The replication of DNA occurs during the synthesis phase, or S phase, of the cell cycle, before enters mitosis or meiosis. The elucidation of the structure of the double helix provided a hint how DNA is copied. Recall that adenine nucleotides pair with thymine nucleotides, and cytosine guanine.
