Juniper's Contrail SD-WAN solution architecture, shown in Figure 2 using a hub-and-spoke topology, is based on the Hybrid WAN model, with CPE devices located at customer branch sites. On the local side of the site, the CPE devices connect to LAN segments and can participate in dynamic routing protocols with other LAN devices.

Contrail SD-WAN Deployment Architectures - Juniper Networks

The contrail VNC defines an object model (vnc_cfg.xsd) that expresses network virtualization concepts as IF-MAP identifiers and metadata relations. The configuration node APIs are autogenerated from this schema. Several APIs expose higher level concepts that need to be translated to lower level objects.
